April 3, 2012

Mr. Bobby Byrd  
Roy O Martin Panels Division  
2189 Memorial Drive  
Alexandria, LA 71301

Dear Mr. Byrd:

This letter is in reference to Momentive adhesive resins and their classification as a Low Emitting Material – Composite Wood.

Momentive's adhesive resins supplied to the Roy O. Martin Lumber Company, LLC plywood plant at Chopin, LA, and the Roy O. Martin Lumber Company, LLC, oriented strand board plant at Oakdale, LA, do not contain urea-formaldehyde resin. Resins supplied to these locations are exterior grade phenol-formaldehyde resins.

These adhesive resins when cured in the products produced at these locations will not emit formaldehyde into the environment, thus being classified as a Low-Emitting Material – Composite Wood by standards such as LEED, a green building standard.

Sincerely,

A handwritten signature in cursive script that reads "Dale Leeper".

Dale Leeper  
PF Technology Manager
